aws United Stat voclabs/user3803880=shrishti042005

Lambda > Functions > Create function

Create function Info

Choose one of the following options to create your function.

- (●) **Author from scratch**
  Start with a simple Hello World example.
- ( ) **Use a blueprint**
  Build a Lambda application from sample code and configuration presets for common use cases.
- ( ) **Container image**
  Select a container image to deploy for your function.

Basic information

Function name

Enter a name that describes the purpose of your function.

FileBackupFunction

Function name must be 1 to 64 characters, must be unique to the Region, and can't include spaces. Valid characters are a-z, A-Z, 0-9, hyphens (-), and underscores (_).

Runtime Info

Choose the language to use to write your function. Note that the console code editor supports only Node.js, Python, and Ruby.

Python 3.12

aws United Stat voclabs/user3803880=shrishti042005

Lambda > Functions > FileBackupFunction

Successfully created the function **FileBackupFunction**. You can now change its code and configuration. To invoke your function with a test event, choose "Test".

Create event notification Info

To enable notifications, you must first add a notification configuration that identifies the events you want Amazon S3 to publish and the destinations where you want Amazon S3 to send the notifications.

General configuration

Event name

Event name

Event name can contain up to 255 characters.

Prefix - *optional*

Limit the notifications to objects with key starting with specified characters.

images/

Suffix - *optional*

Limit the notifications to objects with key ending with specified characters.

.jpg

Event types

Specify at least one event for which you want to receive notifications. For each group, you can choose

General configuration

Event name

FileUploadNotification

Event name can contain up to 255 characters.

Prefix - *optional*

Limit the notifications to objects with key starting with specified characters.

images/

Suffix - *optional*

Limit the notifications to objects with key ending with specified characters.

.jpg

Event types

Specify at least one event for which you want to receive notifications. For each group, you can choose an event type for all events, or you can choose one or more individual events.

Object creation

- [x] All object create events
  s3:ObjectCreated:*
- [ ] Put
  s3:ObjectCreated:Put

Before Amazon S3 can publish messages to a destination, you must grant the Amazon S3 principal the necessary permissions to call the relevant API to publish messages to an SNS topic, an SQS queue, or a Lambda function. Learn more

Destination

Choose a destination to publish the event. Learn more

- (●) Lambda function
  Run a Lambda function script based on S3 events.
- ( ) SNS topic
  Fanout messages to systems for parallel processing or directly to people.
- ( ) SQS queue
  Send notifications to an SQS queue to be read by a server.

Specify Lambda function

- (●) Choose from your Lambda functions
- ( ) Enter Lambda function ARN

Amazon Resource Name (ARN)
arn:aws:s3:::my-primary-files-bucket

Bucket Versioning

Edit

Versioning is a means of keeping multiple variants of an object in the same bucket. You can use versioning to preserve, retrieve, and restore every version of every object stored in your Amazon S3 bucket. With versioning, you can easily recover from both unintended user actions and application failures. Learn more
